Seneca College, Toronto

2021 — 2022

B.Tech Information Technology

IIMT College, Delhi

2010 — 2014

WES-evaluated as Ontario B.Sc equivalent

QA Automation Engineer with 8+ years of experience spanning RF network testing, mobile device QA, and enterprise web automation. Evolved from hands-on hardware testing into building AI-powered automation platforms, multi-agent test orchestration systems, and CI/CD-integrated frameworks. Proven track record of reducing defects by up to 80%, automating 65% of test suites, and leading cross-functional QA initiatives. Experienced working with distributed and remote teams — open to remote full-time, contract, and freelance opportunities.

EXPERIENCE

Bright Order Inc.

Toronto, Ontario

QA Automation Specialist

Jan 2023 — Present

- Perform manual and regression testing on legacy applications — Emdecs Kona, Emdecs Mobile App, and Emdecs One — covering fleet management, shop management, and ELD compliance modules.
- Architected BDD automation frameworks using Python, Behave, Selenium, and Playwright to automate regression suites across web and mobile platforms.
- Built AI-assisted test generation pipelines — pulling Jira tickets, auto-generating test cases, and syncing results back — cutting test planning time by 40%.
- Executed load tests with Locust simulating 500+ concurrent fleet operations, identifying bottlenecks before production.
- Integrated test suites into CI/CD pipelines, enabling daily regression across web, APIs, and ELD modules.
- Validated real-time GPS tracking, HOS compliance, vehicle diagnostics, and telematics data sync across distributed systems.

Sofbang LLC

Delhi, India

QA Analyst

Jul 2020 — Dec 2020

- Built automation framework from scratch using Selenium, Java, Cucumber, and Maven for an AI Chatbot serving a major North American power corporation.
- Automated API testing with REST Assured; created CI pipelines in Jenkins for continuous regression across sprints.
- Drove 65% of manual test cases to automation, reducing regression cycle from 3 days to 4 hours within Agile/Scrum workflows.

OPPO Mobiles

Gurgaon, India

QA Test Engineer

Feb 2017 — Nov 2019

- Led end-to-end mobile QA for top OPPO device launches — automated testing using Appium, Selenium, and Java across Android devices.
- Developed targeted testing strategies that reduced customer complaints by 75% across India in 2018.
- Trained and managed 100+ technical staff on QA processes, test case design, and defect management across black-box, regression, and compatibility testing.

Mobilecomm Technologies

Gurgaon, India

Test Engineer — RF Networks

May 2015 — Feb 2017

- Conducted extensive field testing and RF drive test analysis across GSM, UMTS, and VoLTE networks; played a major role in Airtel's 4G network deployment in 2015.
- Performed RF data collection and drive test log analysis, developing scripts and algorithms to automate log processing when needed.
- Authored test strategies, plans, and traceability matrices for telecom validation — building the analytical foundation that enabled transition into QA automation.

KEY PROJECTS

AI-Enabled QA Platform Full-stack testing platform (React + FastAPI) with 18 AI agents, 72 API endpoints, and intelligent test generation across 50K+ lines of code. AI-assisted development using agentic AI.
Playwright BDD Framework TypeScript automation framework with 3 AI agents, 9-tier smart locator strategy, and Cucumber BDD integration. Built with AI-assisted development.
Multi-Agent Test Orchestration 5 specialized AI agents with MCP servers using CrewAI and LangChain for autonomous test planning and execution. AI-assisted development.
Jira-to-Zephyr QA Automation Automated pipeline generating test cases from Jira tickets using Grok AI with 98% accuracy, syncing to Zephyr. AI-assisted development.
